

Luxe RM software guide book

A practical, screen-by-screen guide to the CRM's functions, features, daily workflow, and current operating condition.

Version 1.0 • Status captured 12 September 2026

The fully loaded Luxe RM dashboard and primary navigation.

Audience: administrators, acquisition staff, sales operators, and support teams.

How to use this guide

This book explains the controls visible in the production interface and separates what loaded from what was functionally verified. Use the status labels before relying on any workflow.

Status key

- AVAILABLE** Loaded and operated during the review.
- PARTIAL** Screen loaded, but one or more actions failed or were not safely executed.
- BLOCKED** Could not be reached or used.
- VERIFY** Visible but not fully exercised in production.

Safe-use rule

Do not experiment on real leads, contacts, opportunities, communications, or settings. Test with clearly named records and remove them afterward.

Known cleanup item: contact "TEST Benjamin QA - DELETE ME" with phone 555-010-0100 remains because Contacts has no delete control.

Observed environment

- **Application:** Luxe RM v1.0.0, build 4b31f82.
- **Role:** Super Admin.
- **Review window:** 12 September 2026, approximately 1:50-2:20 PM EDT.
- **Safety boundaries:** no real records deleted; no password, billing, provider, or account settings changed; no email or SMS sent.

A dashboard still loading. Wait for placeholders to resolve before reading counts or taking action.

Find a workflow quickly

1. Navigation and global tools	04	2. Dashboard	05
3. Daily operating routine	06	4. Leads list and pipeline	07
5. Lead record	08	6. Import, export, and views	09
7. Contacts	10	8. Opportunities portfolio	11
9. Opportunity workspace	12	10. Opportunity tabs	13
11. Phone and communications	14	12. Tasks and schedule	15
13. Workflows, documents, insights	16	14. Settings overview	17
15. Settings reference	18-19	16. Daily operation status	20
17. Workarounds and escalation	21	18. Retest checklist	22
19. Route and feature index	23		

Page-load discipline: after navigation, wait for skeleton placeholders to disappear and for counts, charts, cards, and lists to stop changing. On data-heavy pages, a visible layout is not the same as a completed load.

Recommended reading path

OPERATOR

Pages 4-15, then 20-21.

MANAGER

Pages 5-6, 11-13, and 20.

ADMINISTRATOR

Pages 17-23.

Global shell and account controls

Left navigation

The icon rail opens the primary areas. The observed top-level destinations were Dashboard, Leads, Opportunities, Contacts, Settings, and grouped sections for Communication, Schedule, Workflows, Documents, Insights, and Tools.

Header controls

- **Clock/date:** reference for time-sensitive activity.
- **Global search:** intended to find leads, properties, or contacts.
- **Notifications:** shows due-soon tasks, overdue tasks, and newly created leads; includes Mark all read and View all.
- **User menu:** Profile, Settings, and Log out.

Current status

PARTIAL

Navigation links loaded core pages. Search cleared typed text, Sign Out did nothing, and several grouped sidebar menus were unreliable or inaccessible during the first functional pass.

Operator rule: confirm the page heading changes after each navigation. Do not assume a click registered.

The screenshot displays the LUXE RM application interface. The top header shows the time as 02:51 PM on Saturday, September 12, and a search bar with the placeholder text "Search leads, properties, or contacts...". The left sidebar contains a vertical icon rail with various navigation options. The main content area is titled "Settings" and includes a sub-header "Manage your account and application preferences." Below this, there are tabs for Account, Security, Notifications, Team, Goals, Pipeline, Appearance, System, Automation, and Audit Log. The "Notifications" tab is active, showing a list of notifications. The "Team Calls (72)" section is also visible, displaying a table of call records.

8/15/2026, 5:19:29 PM	Admin User	outbound	+17742346179	failed	—	—

The Notifications panel on the right shows several alerts:

- Task due soon:** Initial follow-up is due at 2026-09-12T01:23:29 129Z 22h ago
- Task due soon:** New lead follow-up is due at 2026-09-12T01:23:29 215Z 22h ago
- New lead created:** A new lead was created 22h ago
- Task overdue:** New lead follow-up was due at 2026-09-12T01:23:29 21h ago
- Task overdue:** Initial follow-up was due at 2026-09-12T01:23:29 129Z

Notifications panel with task and lead alerts.

Start each day from the control center

The dashboard summarizes current volume, pipeline attention, team activity, and property performance. Let it finish loading before trusting any number.

Dashboard after data has loaded: KPI cards, attention items, activity, team, and property summaries.

KPI CARDS

Revenue, Active Leads, Deals in Pipeline, and Conversion Rate. Treat them as orientation, then open the source module for action.

OPERATIONAL PANELS

Needs Attention, Revenue Overview, Team Activity Feed, Team Members, and Properties Overview.

QUICK ACTIONS

Add Lead, New Contract, Start Dialing, Resume Playground, and View Hot Leads were visible but click behavior was unreliable.

Data-quality note: the Activity Feed displayed some “Unknown User” entries. Verify ownership before assigning follow-up.

A repeatable operating rhythm

Morning opening

- 1 Load the dashboard fully.** Wait for placeholders to resolve and capture the four KPI values.
- 2 Review Needs Attention and notifications.** Prioritize overdue tasks, due-soon tasks, and hot leads.
- 3 Open Tasks.** Work Overdue first, then Today; confirm assignee, priority, and linked record.
- 4 Review new leads.** Check address, owner, score, status, contactability, and notes.
- 5 Confirm phone readiness.** Verify browser softphone status before dialing.

Midday control

- ☐ Recheck Today and Follow-up queues.
- ☐ Move qualified records to Opportunities.
- ☐ Update notes immediately after contact.
- ☐ Review opportunities by active stage.
- ☐ Escalate controls that do not respond.

End-of-day close

- ☐ Complete or reschedule every due task.
- ☐ Confirm notes and dispositions are saved.
- ☐ Review unassigned and high-priority items.
- ☐ Check notification count and audit logs.
- ☐ Record defects in the daily status log.

Current restriction: because task/note submission, search, and many click actions failed during testing, do not claim a workflow is complete unless the saved result is visible after a refresh.

Minimum daily status entry

Area	Record	Evidence
System	Login, load, search, save	Pass/fail + time
Work queues	Overdue, Today, hot leads	Counts after load
Communications	Phone/provider readiness	Status indicator
Incidents	Broken control + route	Repro steps

List, pipeline, filters, and conversion

Leads Pipeline list with toolbar, columns, contact links, and action controls.

Primary controls

- **List / Pipeline:** switch table and stage views.
- **Import/Export:** bulk file workflow.
- **Views:** saved or alternate list configurations.
- **Columns:** choose visible fields.
- **Luxury:** specialized filter/view control.
- **Filters:** narrow the lead population.
- **Load more / Load all:** expand beyond the first 100 records.
- **Add Lead:** create a lead.

Table anatomy

Observed columns: selection, Address, Owner, Status, Score, Value, Contact, Notes, and Actions. Phone and email values can act as contact links. Rows offer Convert to Opportunity or View Opportunity when already linked.

PARTIAL The list and sorting loaded; Pipeline switching, Add Lead, filters/dropdowns, and Load more were unreliable in the first test.

Work a lead without losing context

The screenshot displays the LUXE RM Leads Pipeline interface. On the left, a sidebar contains navigation icons. The main area shows a 'Leads Pipeline' table with columns: Address, Owner, Status, Score, Value, Contact, and Notes. A lead titled 'DELETE-CONFIRM-TEST 2026-09-11, Baltimore' is selected. On the right, a 'Lead detail drawer' is open, showing the lead's details and actions.

Leads Pipeline Table:

Address	Owner	Status	Score	Value	Contact	Notes
DELETE-CONFIRM-TEST 2026-09-11, Baltimore	Test Owner	New	—	\$—	(555) 010-2030	
4415 Carolyn CT, Huntingto...	Mike Asset	Under Contract	—	\$—	6023297873	
11 Lomond CT, Rosedale	Mike Asset	Under Contract	—	\$—	6023297873

16811 May Ave, Eastpointe	Colin Jeffrey	New	—	\$—	5868768483 colinjeffrey@gmail.com	
45435 Platt St, Union	Joseph Combs	New	—	\$—	5864108019	

Lead detail drawer (DELETE-CONFIRM-TEST 2026-09-11, Baltimore):

- Test Owner
- Phone: (555) 010-2030
- Email: —
- Estimated Value: —
- Created: 9/11/2026
- Score: —
- Voice: [icon]
- Buttons: New, Add Lead
- Filters: Views, Columns, Luxury, Filters, Load more
- Buttons: Import/Export, Search leads...
- Buttons: Skip Trace, Run Skip Trace
- Buttons: Both, Not run yet
- Buttons: Provider result, Run a skip trace to look up owner contacts.
- Buttons: No lookup has run yet for this record.
- Buttons: Total, Urgency, Confidence
- Buttons: Score breakdown, 0 factors counted: 10 unavailable
- Buttons: Motivation score, no data on file
- Buttons: How motivated the owner appears to sell (0-100 input), No evidence on file - not counted toward the score.

Lead detail drawer with owner contact, skip trace, tasks, and record actions.

Record functions

- **Voice / phone link:** start contact.
- **Skip Trace:** select a provider and run trace when enabled.
- **Tasks:** review linked work and mark complete.
- **Date/time + assignee:** schedule follow-up.
- **Convert to Opportunity:** advance a qualified lead.
- **Edit Lead / Delete Lead:** maintain or remove the record.

Qualification sequence

1. Confirm address and owner identity.
2. Validate phone/email contactability.
3. Review status, score, value, and notes.
4. Set the next task with owner and due time.
5. Convert only when qualification criteria are met.

Provider dependency: the reviewed record showed “Skip Trace is not enabled.” Running a trace requires an enabled account/provider and should not be tested on a real person without authorization.

Import, export, columns, and views

Import/Export modal: choose the import path and file.

Import mapping stage: match incoming columns to CRM fields.

Import sequence

- 1 Prepare the source file.** Keep one header row, normalize phones and emails, and remove duplicates.
- 2 Open Import/Export.** Select the supported file and import mode.
- 3 Map every column.** Confirm address, owner, contact fields, status, source, and any custom fields.
- 4 Review before commit.** Validate row count and mappings; use a small test file first.
- 5 Verify the result.** Refresh, search for known test rows, and review any rejects.

Columns menu used to show or hide fields in the Leads table.

Current status: the dialogs and menus were visible during documentation, but search and several click-driven actions failed during functional testing. Treat bulk operations as verify-only until retested.

Create and reach people from one list

Contacts page with search, import/export, quick-create fields, and contact links.

Visible functions

- Search contacts.
- Import/Export contacts.
- Quick-create with name and phone.
- Open telephone and email links.

Verified behavior

PARTIAL The list loaded and a test contact was created successfully. Search cleared entered text. No edit or delete control was visible.

Cleanup required: "TEST Benjamin QA - DELETE ME" (555-010-0100).

Operating rule: double-check spelling and phone number before clicking Add. Until edit/delete is added, a mistake may require administrator or database cleanup.

Manage the property portfolio

Opportunity cards showing property imagery, pricing, status, and quick actions.

Portfolio controls

- Import/Export.
- Search opportunities.
- Filters and All Stages.
- List / Pipeline view.
- Add Opportunity.

Opportunity cards

Cards combine the property address, image, asking/value information, and stage/status. Open a card to enter the full opportunity workspace.

AVAILABLE Portfolio display and detail navigation loaded. Avoid moving a real stage solely for testing.

Pipeline stages observed

Active → Negotiation → Under Contract → Pending → Sold, with Withdrawn available for records that leave the process.

One record, nine work areas

Opportunity workspace with property header, stage actions, tabs, metrics, notes, and photos.

Header actions

Open Lead, Underwrite Deal, Run Comps, Generate Contract, Call Owner, Tasks, Calendar, Move Stage, Create Public Listing, Add Note, Add Task, and Upload Photos.

Record actions

Edit Opportunity, Open in Playground, Link Lead, edit/delete notes, show more activity, add/upload/link assets, and schedule work.

Stage discipline: move a stage only when the evidence is present in the record. Pair every material change with a note and next task.

The nine tabs and what belongs in each

PROPERTY DETAILS

Address, physical facts, owner/contact information, record summary, and property photos.

FINANCIAL ANALYSIS

Acquisition assumptions, costs, value, margin, and underwriting outputs.

ACTIVITY LOG

Chronological calls, notes, tasks, stage changes, and user actions.

MEDIA

Photos and other property media. Upload only files authorized for the record.

DEAL ROOM

Deal-specific files and collaboration materials.

COMPS

Comparable properties and valuation support; use Run Comps from the header.

BUYER MATCHES

Potential buyers matched to the property or deal profile.

PARTIES

People and organizations connected to the transaction.

PUBLIC LISTING

Public-facing listing information and publishing controls.

Verification note: all nine tabs loaded during review. A loaded tab proves display access, not that every save, upload, publish, or external-provider action succeeds.

Recommended record order

Property Details → Financial Analysis → Comps → Parties → Buyer Matches → Deal Room/Media → Public Listing, while Activity Log remains the audit trail throughout.

Phone, contacts, history, voicemail, analytics

Phone module with Dial tab, browser softphone, keypad, and quick-search contacts.

Phone tabs

- **Dial:** number entry, keypad, Call, and End.
- **Contacts:** find a person to call.
- **History:** review past call activity.
- **Voicemail:** access recorded messages.
- **Analytics:** summarize calling performance.

Sidebar group

Communication expands to Phone, Dialer Workspace, Communications, Voicemail, and Messages.

PARTIAL The Phone/Dial view loaded and showed browser softphone readiness. No live call was placed. Other communication destinations were not fully function-tested.

Before dialing: confirm the intended record, number, consent/compliance basis, local calling time, and that the call result can be saved.

Tasks, calendar, and booking

Schedule menu exposing Today, Tasks, Calendar, and ICP Booking.

Tasks queue with time windows, filters, assignment, status, and Complete actions.

Schedule destinations

Today, Tasks, Calendar, and ICP Booking organize due work and appointments.

Task queue controls

- **Views:** Overdue, Today, Next 7 days, Next 30 days, Follow-up, Admin, Completed, and All.
- **Filters:** title/description, date range, assignee, active state, and other selectors.
- **Actions:** Refresh, New Task, Select all, Complete selected, Assign, Open Lead, individual Complete.
- **Editable fields:** due date/time, priority, status, and assignee controls are present per row.

PARTIAL Task data loaded, but quick-add/submit controls did not save during the initial functional test.

Workflows, documents, insights, and tools

The sidebar exposes additional grouped modules. Their names are part of the product map, but their detailed behavior could not be verified safely because the grouped menus were inaccessible during the initial functional test.

Workflows

Expected home for repeatable automation or process definitions.

BLOCKED

Documents

Expected home for document storage, generation, or record attachments.

BLOCKED

Insights

Expected home for reporting and analysis beyond dashboard summaries.

BLOCKED

Tools

Expected home for utility features and supporting operational tools.

BLOCKED

Documentation boundary: this guide does not invent workflows for screens that could not be opened. After navigation is fixed, capture each child route, its buttons, permissions, empty states, save behavior, and external dependencies, then revise this section.

Acceptance requirement

Every grouped sidebar trigger must expand by mouse, keyboard Enter/Space, and hover if hover behavior is intended. Every child item must open a page with a unique heading and stable URL.

Settings: one place for eleven control areas

Account settings with profile and company fields.

Settings tabs

Account, Security, Notifications, Team, Goals, Pipeline, Appearance, System, Automation, Audit Logs, and Call Audit.

Access pattern

The Settings page and all tab panels rendered. Mouse tab switching failed in the first test; keyboard focus + Enter worked for settings tabs.

PARTIAL

Change-control rule: record the old value, reason, approver, and rollback before changing security, provider, pipeline, automation, or team settings. Test in a non-production environment when possible.

Settings reference: account through pipeline

Account

Profile information includes first name, last name, email, phone, company, and license number, with Save Changes.

VERIFY SAVE

Security

Password-change and two-factor authentication (2FA) controls are presented. Use only under an approved account-security process.

NOT CHANGED

Notifications

Controls the alerts the user receives. Verify each channel and event type after saving.

NOT CHANGED

Team

Team-member administration and role/access management.

NOT CHANGED

Goals

Targets used to guide performance tracking and dashboard reporting.

NOT CHANGED

Pipeline

Stages and pipeline configuration for lead/deal progression.

NOT CHANGED

Administrator validation

- ☐ Confirm role permissions before exposing a tab.
- ☐ Save one test change in staging and refresh to prove persistence.
- ☐ Confirm audit logging records the actor, old value, new value, and time.
- ☐ Restore the prior value and verify rollback.

Settings reference: appearance through call audit

Appearance

User-interface preferences and visual presentation.

System

Provider and system status. Use for dependency health checks.

Automation

Rules and automated actions. Review triggers, conditions, outcomes, and failure handling before activation.

Audit Logs

Administrative event history for accountability and troubleshooting.

Call Audit

Filters by agent, status, disposition, and date range; Apply and Refresh. Team call columns include time, agent, direction, number, status, disposition, duration, and note.

Settings with the Communication group expanded in the sidebar.

Call audit use

1. Choose agent/status/disposition.
2. Set from/to dates.
3. Apply, then verify Team Calls count.
4. Review failed, ringing, or incomplete calls.
5. Refresh after corrections.

Operational condition on 12 September 2026

Overall status: impaired. Core data loaded, but a critical app-wide interaction failure made many write actions and menus unusable. Treat the CRM as effectively read-only until the frontend is fixed and retested.

Area	Status	Observed condition
Login/session	Available	Login succeeded; session persisted
Dashboard	Available	Widgets and counts loaded
Leads	Partial	List loaded; actions unreliable
Opportunities	Available	Cards, pipeline, 9 tabs loaded
Contacts	Partial	Create worked; edit/delete absent
Phone	Partial	Dial screen loaded; no live call test
Tasks	Partial	Queue loaded; submit did not save
Settings	Partial	Tabs loaded; mouse switching failed
Extended groups	Blocked	Six grouped modules inaccessible
Logout	Blocked	Sign Out inert

10,658

ACTIVE LEADS DISPLAYED

14

PROPERTIES DISPLAYED

8

TEAM MEMBERS DISPLAYED

Counts are a point-in-time display from the fully loaded dashboard and will change with production data.

Known issues, safe workarounds, escalation

Severity	Issue	Safe response
Critical	Most buttons, menus, and dialogs ignore clicks	Do not repeat writes; capture route/control
Critical	Search clears entered text	Use visible lists only; do not claim no match
High	Grouped sidebar modules do not expand	Record as inaccessible; avoid guessed URLs
High	Sign Out does nothing	Close sensitive work; admin fix required
High	Tabs fail on Leads/Settings	Settings may work via focus + Enter
Medium	Load more has no visible effect	Do not treat first 100 as full population
Medium	Contacts lacks edit/delete	Validate before Add; admin cleanup
Low	"Unknown User" in activity feed	Verify actor from audit/source record

Escalation packet

- ☐ Record date/time, user role, route, browser, and control label.
- ☐ State expected behavior and actual behavior.
- ☐ Include whether mouse and keyboard both fail.
- ☐ Capture a screenshot without credentials or sensitive values.
- ☐ Note whether refresh, direct navigation, or a second page reproduces it.
- ☐ Do not modify production data merely to produce evidence.

Likely investigation area, not a confirmed cause: global event delegation, popup/portal handling, or frontend hydration. Engineering should verify with browser console, network traces, and component tests.

Retest checklist after a fix

Global

- ☐ Login, auth guard, session persistence.
- ☐ Global search accepts and retains text.
- ☐ Notifications opens and marks read.
- ☐ User menu opens; logout ends session.
- ☐ Every sidebar group expands by mouse and keyboard.

Opportunities

- ☐ List, cards, pipeline, filters.
- ☐ All nine tabs.
- ☐ Add note/task/photo and confirm save.
- ☐ Move test stage and roll back.
- ☐ Comps, underwriting, contract, listing in staging.

Leads and contacts

- ☐ Add, open, edit, save, search, filter.
- ☐ List/Pipeline switching.
- ☐ Columns, Views, Import/Export.
- ☐ Load more/load all changes count.
- ☐ Convert a test lead; verify linkage.
- ☐ Create/edit/delete test contact.

Operations/admin

- ☐ Task create, assign, complete, reschedule.
- ☐ Phone tabs and provider status.
- ☐ Communication and Schedule children.
- ☐ Workflows, Documents, Insights, Tools.
- ☐ All 11 settings tabs by mouse/keyboard.
- ☐ Audit entries for every test write.

Production-safe boundary: use clearly marked test records. Do not send communications, publish listings, change credentials, alter billing/providers, or delete real data during retest.

Exit criterion

The system is ready for normal operations only when every critical and high-severity item passes, test writes persist after refresh, and all test data can be removed through the user interface.

Route and feature index

Route / area	Primary functions	Status
/	KPIs, attention, activity, team, properties, quick actions	Available / actions partial
/leads	List, pipeline, add, views, columns, filters, import/export, convert	Partial
/contacts	Search, import/export, quick create, phone/email	Partial
/opportunities	Cards, list/pipeline, stages, filters, add/import	Available display
/opportunities/:id	Actions + 9 record tabs	Available display
/phone	Dial, contacts, history, voicemail, analytics	Partial
/tasks	Queues, filters, assignment, completion, new task	Partial
Schedule group	Today, Tasks, Calendar, ICP Booking	Partial
Communication group	Phone, Dialer Workspace, Communications, Voicemail, Messages	Partial / blocked
Other groups	Workflows, Documents, Insights, Tools	Blocked
/settings	11 administration tabs	Partial

Settings tab index

Account • Security • Notifications • Team • Goals • Pipeline • Appearance • System • Automation • Audit Logs • Call Audit.

Opportunity tab index

Property Details • Financial Analysis • Activity Log • Media • Deal Room • Comps • Buyer Matches • Parties • Public Listing.

Maintenance note: revise this index whenever a route, tab, stage, provider, or permission changes. The daily status page should always carry its observation date.
